Proposed Development Schedule As Of September 2007*

Access 2007 Advanced (December 2007)
Access 2007 offers many more powerful features than a beginning user first touches. This series will explore some of the more powerful abilities of Access, including pivot tables and charts, graphs, forms, security, multitable and crosstab queries, macros, and more.

AJAX (December 2007)
Asynchronous JavaScript and XML is one of the most popular current programming techniques used in web application development. Use this series to learn how to build interactive, exciting, fast apps for your web site programming.

Communicate with Power (December 2007)
Most people's jobs include working with a lot of people who are coworkers from across the company (or even from other companies). Many times, doing your job properly depends upon other people doing the things or having the information you need. How can you persuade, influence, and inform other people in ways that will make things happen? This series will talk about how to spark action and motivation from others, especially ones who are not in a direct line of command with you.

CompTIA A+ Essentials 220-601 (December 2007)
This series will give you the study guide you need for the CompTIA A+ Essentials exam, which is the first of two exams now required to earn CompTIA A+ certification. This certification validates the knowledge and skills of entry-level computer service technicians. It is an international, vendor-neutral certification recognized by major hardware and software vendors, distributors and resellers. CompTIA A+ certification confirms a technician's ability to perform tasks such as installation, configuration, diagnosing, preventive maintenance and basic networking.

Outlook 2007 (March 2008)
Outlook is the most common email application in the world. And it includes many features beyond just email, including the calendar, meeting management, tasks, and contact information, that can all interact with each other. This series will examine all of these features and more in the latest version of Outlook that has been released with the Office 2007 package.

PowerPoint 2007 (December 2007)
Office 2007 includes the latest version of PowerPoint, the presentation creation package that helps add visual impact and dynamic information to your presentations. This series will walk you through creating your own presentations.

Project Management Effectiveness (December 2007)
This series goes beyond the basic mechanics of project management and focuses on the people side of getting projects accomplished. What can you do, who can you talk to, and how can you communicate with them to ensure your project progresses as smoothly as possible? Look to this series for topics such as communicating, documenting, emailing, influencing team members across all departments, and balancing multiple projects.

SharePoint 2007 (December 2007)
SharePoint 2007 is a content and information management system for your organization. This course will help you use your SharePoint 2007 sites to share documents, collaborate on processes and materials, and find and share data throughout your organization.
